ALPHAREX³ THE FULL PRODUCT RANGE

THE ALPHAREX³ FAMILY OF PROGRAMMABLE DIGITAL TIME SWITCHES SAVES ENERGY, REDUCES ELECTRICAL COSTS AND TIME WITH THE EASE OF INSTALLATION.

One unique software and data key for all digital time switches, for quick and easy programming and transferring programs to other time switches, as well as creating backup copies and securing data in distribution boards for future reference.

Identical function buttons and display for all time switches. Once you have mastered one, you can operate any model, regardless of the time switch or application.

Simple programming precise to the second with digital clock precision ±0.2 sec per day.

Manufactured by
Legrand in Germany

DIGITAL BLUETOOTH TIME SWITCH DAILY, WEEKLY, YEARLY, ASTRO

- Available in 1 or 2 channels
- 2 modules wide
- Daily, Weekly, Yearly program options
- Native Bluetooth: Directly program from smartphone with no need to touch the timer. No accessories required
- Data can be exported to/imported from the timer within the Bluetooth time switch app
- Passwords, location, and other settings can also be controlled via the app
- Data can be copied from one timer to another, even on a different project
- High precision timer (0.1 sec)
- 2 Din Clip at the back for ease of installation
- 5 year reserve battery life
- Ability to program directly from the timer

ALPHAREX³ PROGRAMMABLE WEEKLY TIME SWITCHES

- 1 channel with 56 programs
- 2 channels with 28 programs per channel

ALPHAREX³ ASTRO ASTRONOMICAL TIME SWITCHES

- Switches according to astronomical time or operates as a programmable weekly time switch
- 1 output with 56 programs
- 2 output with 28 programs per channel
(No need to install a photoelectric cell)

DIGITAL BLUETOOTH TIME SWITCH

- Directly programmable with APP via Bluetooth
- 1 or 2 channel option
- Daily, Weekly, Yearly programs

Applications:

Commercial and Residential
Ideal for school bells, pool pumps, air cons, garden lighting and water systems.

Bluetooth communication is available with mains connected. BLE = Bluetooth Low Energy. *Legrand strongly recommend the installation of modular contactors with all time switches.

MICROREX ANALOGUE TIME SWITCH

THE TRUSTED MICROREX ANALOGUE TIME SWITCHES OFFER EASY OPERATION AND PROGRAMMING BY SETTING THE ANALOGUE SWITCHING DIAL FOR SIMPLE APPLICATIONS.

Manufactured by
Legrand in Germany

MICROREX DAILY/WEEKLY TIME SWITCH 1 MODULE

Daily time switch:

With synchronous or quartz motor

Weekly time switch:

With synchronous or quartz motor

- 15 min switching dial segment (daily)
- ± 5 min accuracy (daily)
- 2h min switching dial segment (weekly)
- ± 30 min accuracy (weekly)
- With and without 100h battery reserve

MICROREX DAILY/WEEKLY TIME SWITCH 3 MODULE

Daily time switch:

With synchronous or quartz motor

Weekly time switch:

With synchronous or quartz motor

- 15 min switching dial segment (daily)
- ± 5 min accuracy (daily)
- 2h min switching dial segment (weekly)
- ± 30 min accuracy (weekly)
- With and without 100h battery reserve

ADVANTAGES OF WORKING WITH THE MICROREX SERIES

- Easy installation and set up
- Precision clockwork:
±0.2 sec per day clock precision
- Changeover contact as switch output (horizontal)
- Normally open contact (vertical)
- With and without removable 100h battery reserve

SEALABLE COVER

CAPTIVE SWITCHING SEGMENTS

CHANGEOVER CONTACT (HORIZONTAL), NORMALLY OPEN CONTACT (VERTICAL)

MANUAL SWITCHING: ON/AUTOMATIC/OFF

*Legrand strongly recommend the installation of modular contactors with all time switches.

AlphaRex³ Bluetooth low energy (BLE)

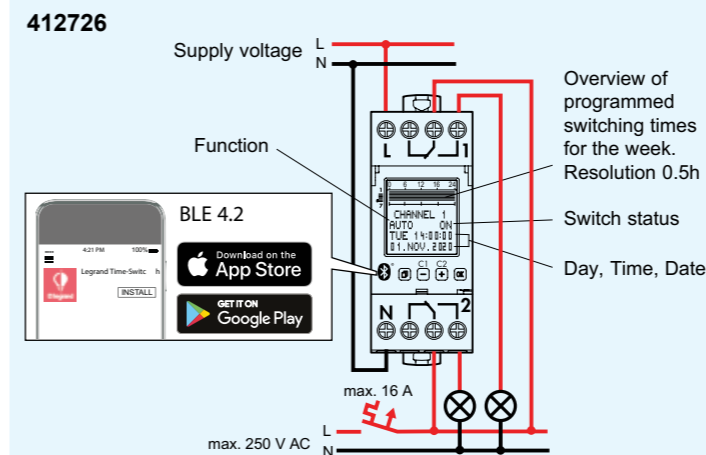

- Available in 1 or 2 channels
- 2 modules wide
- Daily, Weekly, Annual program options
- Native Bluetooth: Directly program from smartphone with no need to touch the timer. No accessories required
- Data can be exported to/imported from the timer within the Bluetooth time switch app
- Passwords, location, and other settings can also be controlled via the app
- Data can be copied from 1 timer to another, even on a different project
- High precision timer (0.1 sec)
- 2 Din Clip at the back for ease of installation
- 5 Years battery in reserve
- Screen on the timer in backup

Technical specifications

Type	AlphaRex ³ BLE
Cat. no.	412724 / 412726
Nominal voltage	230V 50/60Hz
Relay outputs	2 changeover contacts 16A 250V ~μ cos φ = 1
Accuracy	~0,1 s/day
Wire cross-sections	single-strand 1,5...4 mm ² multi-strand 1,5...2,5 mm ² max. 1,4Nm
Programs	56
Local coordinates	Resolution 1°/ 1' in EXPERT-Mode
Battery reserves	5 years
Storage temperature	-20°C to +60°C
Operating temperature	-20°C to +55°C
Transmission frequency	2400MHz...2483,5MHz
max. transmission power	1,58mW
Power consumption	ca. 1,5W

Connection diagram

Operating principle: Typ 1.B. S. T. IEC/EN 60730-1, IEC/EN 60730-2-7
 Degree of contamination: 2
 Switch output, potential-free
 Rated impulse voltage: 4 kV

Technical specifications

Type	AlphaRex ³ BLE
Cat. no.	412723 / 412725
Nominal voltage	230V 50/60Hz
Relay outputs	1 changeover contacts 16A 250V ~μ cos φ = 1
Accuracy	~0,1 s/day
Wire cross-sections	single-strand 1,5...4 mm ² multi-strand 1,5...2,5 mm ² max. 1,4Nm
Programs	56
Local coordinates	Resolution 1°/ 1' in EXPERT-Mode
Control-cable length	max. 50m
Control signal	230V AC/ca. 2mA
Control-pulse duration	100...200ms
Delaytime	0min...23h 59min 59s
Battery reserves	5 years
Storage temperature	-20°C to +60°C
Operating temperature	-20°C to +55°C
Transmission frequency	2400MHz...2483,5MHz
max. transmission power	1,58mW
Power consumption	ca. 1W

Power contactors CX³

Technical characteristics

- Rated impulse withstand voltage (U_{imp}): 4 kV
- Mechanical endurance (no. of operating cycles): 10⁶ cycles
- Operating temperatures: -25 °C to +40 °C
- Storage temperatures: -40 °C to +70 °C

Contactor protection against short circuits according to standard EN 61095, conditional short-circuit current:

- I_q = 6 kA for 16 to 25 A contactors
- I_q = 3 kA for 40 to 63 A contactors

Circuit breaker or gG fuse rated:

- ≤ 16 A for 16 A rating • ≤ 40 A for 40 A rating
- ≤ 25 A for 25 A rating • ≤ 63 A for 63 A rating

Consumption of a contactor control coil

16 A and 25 A power contactors				
Coil voltage	24 V~		230 V~ low noise	
Current	16 A and 25 A	25 A	25 A	16 A and 25 A

AlphaRex³ digital time switches

BLUETOOTH SET UP

Pincode

The factory setting for pin code entry is **PASSIVE**. If the pin code is set to **ACTIVE**, the access code is preset to 123123. This is unless the pin code was changed in the Legrand Time-Switch app.

- The Legrand Time-Switch app can be used to change the access code.
- A maximum of 8 smartphones/tablets can be simultaneously paired with a timer.
- If more smartphones/tablets need to be paired, the oldest pairing will be deleted.
- The standard time switch name (AlphaRex) can be changed using the Legrand Time-Switch app.

If **PASSIVE** is selected, or after a reset, the access lock is removed. The access code set remains unchanged.

Connecting smartphones and AlphaRex³ BLE

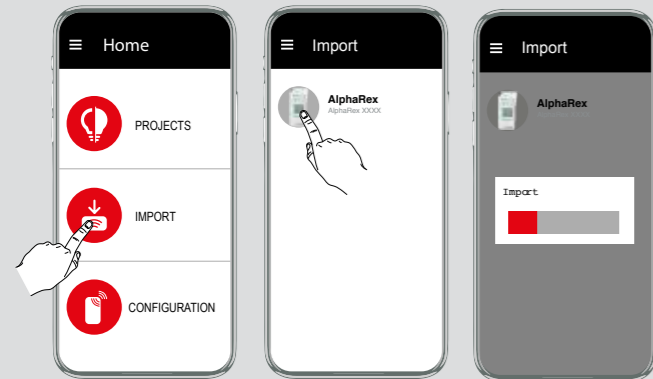

Below are the basic instructions for pairing a smartphone with an AlphaRex³ BLE timer.

- First install the Legrand Time-Switch app.
- Go to the Bluetooth section of your smartphone; this is usually under Settings. Make sure Bluetooth is switched on.
- Location services on the smartphone must be enabled; GPS does not have to be activated.
- The AlphaRex³ BLE timer must be supplied with mains voltage.
- Devices are now displayed within the Legrand Time-Switch app, both when uploading and when importing.
- Select the AlphaRex³ BLE timer from the list of devices.
- The access code is 123123.
- Enter the access code.
- The AlphaRex³ BLE is now paired.

Importing projects

Note! At the start of and during Bluetooth communication, the relay outputs are put into an idle state.

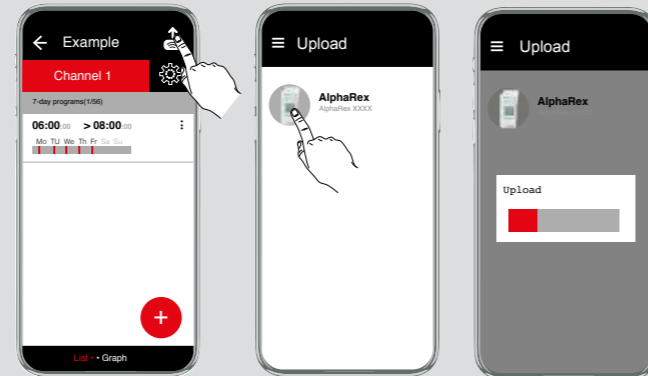

- Select the AlphaRex³ model from which the project is to be imported.
- The transfer will start automatically

Uploading projects

Note! At the start of and during Bluetooth communication, the relay outputs are put into an idle state.

- Make sure your smartphone has Bluetooth and positioning turned on.
- Select a project.
- Press the key
- Select the AlphaRex type to which the project is to be transferred.
- The transfer starts automatically.

Reset

Warning!

The memory is deleted and all saved data is lost. Pin code entry is set to **PASSIVE**. The access code set remains unchanged.

Hold down **OK** for more than 3 seconds and at the same time press and release.

The language, time, date, summertime/wintertime and switching times will have to be reentered.

Warning!

Elektrical shock - Disconnect all power from the device before dismantling the module and replacing the battery.

Always use a Li cell type battery (LiMnO₂) CR2477, 3V high temperature type min +85 °C.

AlphaRex³ digital time switches

Operating temperature			-20 to +55 °C	
Degree of protection			IP20 (mounted in distribution board)	

¹⁾ A program consists of a switch-on time, a switch-off time as well as days or day blocks which are assigned as "switched-on" or "switched-off"
²⁾ Can be set to mains synchronous operation

Connection diagram

Functions

- Select menu, go back while in menu
Press > 1 sec. = operating display
- OK** Confirm the selection or accept the parameter
- Select the menu item or set the parameter;
for 2-channel time switches, can be used to select the channel (channel 1 – channel 2)
- +**

Brief description of programming functions

Text guidance

Guides the user through programming and setup with plain text prompts. Each step can be read on the screen, and the function that is currently active flashes. An integrated display and button light makes operation easy even in poorly lit environments.

Set language

The language selection function can be accessed using the "MENU" button. The language is set to English by default. The following languages can be selected: German, English, French, Italian, Spanish, Dutch, Portuguese*, Swedish*, Norwegian*, Finnish*, Danish*, Polish*, Czech*, Russian*, Turkish*.

*Excluding AstroRex DY64

Time, date, summer time (daylight saving time)

The time switch is preset at the factory to the current time and date. The time can be changed by selecting "MENU" + "SET".

Reset

Simultaneously pressing all buttons for more than 2 seconds deletes all data. Language, date/time, summer time (daylight saving time) and switch times must be set again.

Data key

If the supply voltage is switched on, the "KEY – READ – WRITE" menu item is automatically opened when a data key is inserted. "WRITE": Program data is written from the time switch to the key. Caution: Any data present on the key will be overwritten. "READ": Program data is written from the key to the time switch; any switching programs on the time switch are overwritten. Only one master switching program, which consists of multiple switching programs, can be saved on the time switch or on the key at a time. If the supply voltage is not connected, the "KEY – READ – WRITE" menu item is not automatically opened when a data key is inserted. The "KEY" function can still be selected from the menu even if the supply voltage is not connected.

PC programming

In addition to the easy, text-guided programming directly on the time switch, switching programs can also be created on a PC with the software program from Legrand and transferred to the time switch using a data key. A data transfer device (cat. no.: 412873) is required to transfer switching programs created on a PC to the data key. The device is connected to the PC using the USB plug. In addition to the data transfer device, we also offer a CD with the software and the necessary drivers. PC system requirements: USB port; Windows® XP, Windows® Vista, Windows® 7; approx. 40 MB of free memory.

Brief description of programming functions

Weekly programs

To create a weekly program, select "MENU", "PROGRAM", and then "CREATE" to easily enter programs which are repeated on a weekly basis. A weekly program consists of a switch-on/switch-off times and days which are assigned as "switched-on" or "switched-off". The following predefined blocks can be selected: "MONDAY – SUNDAY", "MONDAY – FRIDAY" or "SATURDAY – SUNDAY"; the assigned days of the week are fixed. The switch-on/switch-off times must be entered. The user can also set custom day blocks. By selecting "CUSTOM", switch times can be freely assigned to any days of the week. This option also allows the user to set switch times at midnight.

Yearly programs

This menu item allows the user to enter (additional) yearly programs, which are only executed within a defined validity period. They can overlap with one another and with the weekly programs on the same channel based on an "OR" connective. The validity period is defined by entering the start date (at 00:00:00) and the end date (at 24:00:00). The start date must be entered before the end date. With the "EVERY YEAR" option, the additional switch times have the same validity period each year (Christmas, national holidays, birthdays, etc.) Select the "ONCE" option when additional switch times are needed within a validity period (e.g. during holidays), but the start/end dates of the holiday period change from year to year.

Special programs (priority program)

Weekly and yearly programs on the same channel are not executed during the validity period of a special program. However, other special programs can be executed during the validity period. Different special programs can overlap with each other based on an "OR" connective. With the "EVERY YEAR" option, the additional switch times have the same validity period each year (Christmas, national holidays, birthdays, etc.). Select the "ONCE" option when additional switch times are needed within a validity period (e.g. during holidays), but the start/end dates of the holiday period change from year to year. Additional options include "MON TO SUN"/"CUSTOM": the respective channel only switches according to the special program; "PROG ON"/"PROG OFF": the respective channel is switched on/off during this time period.

Basic functions for "Astro"

Location (Astro)

The sunrise/sunset times, which change daily, are calculated for the location programmed in the AlphaRex. The unit is delivered with the location set to "GERMANY – SOEST" by default. Enter the actual location for optimal operation. This can be done in two ways. Select "MENU", "SET" and "ASTRO" to access the two options "LOCATION" and "COORDINATES". "LOCATION": With this menu item, the user can select the country and city which is closest to the site of operation. "COORDINATES": Alternatively, the user can select this menu item to set the geographical coordinates of the location. The longitude and latitude values are entered in degrees or degrees and arcminutes (precision can be set in expert mode). Information on coordinates and time zones can be found in the time zone map included with every time switch.

Offset

By selecting "MENU", "SET", "ASTRO" and "OFFSET", time differentials can be set for the calculated switch times. This can be done in two ways: time offset or angle offset.

In time offset, a time differential can be entered to shift the switch time by up to +/- 120 min relative to the sunrise/sunset times. In angle offset, a value can be entered in degrees and arcminutes to shift the switch time by up to +/- 12° 00' relative to the sunrise/sunset times. The time differentials are set separately for sunrise and sunset using the menu items "SUNSET" (opens the screen for setting the sunset offset) and "SUNRISE" (opens the screen for setting the sunrise offset).

Example:
For a time differential of +30 min, the time switch switches 30 min. after sunrise and 30 min. after sunset.
For a time differential of -30 min, the time switch switches 30 min. before sunrise and 30 min. before sunset.

Offset correction function

Select "MENU", "SET", "ASTRO" and "CORRECTION" to set a time correction for the 6-month periods surrounding summer and winter. The time correction is set to 0 min. by default and can be set from 1 min. up to 30 min. The time correction for sunset is entered in the "SUNSET" menu item. The time correction for sunrise is set in the "SUNRISE" menu item. The correction function overlaps with the calculated astronomical switch times, including the offset settings.

Example:

Setting a time correction extends the daily switched-on time by up to 60 min. in the middle of the six winter months (switches off up to 30 min. later in the morning and switches on up to 30 min. earlier in the evening). In the middle of the six summer months, the time correction reduces the daily switched-on time by up to 60 min. (switches off up to 30 min. earlier in the morning and switches on up to 30 min. later in the evening). The time correction varies continuously between the two max. values during the rest of the year.

Basic settings using a PC and day key

All of the basic settings described above, with the exception of the current time and date, can be set up using the AlphaSoft software from Legrand and imported to the time switch using the data key.

Note:

If the offset is set in degrees, the time switch always switches at points when the brightness is the same, despite the fact that the twilight duration changes over the course of the year. Sunrise and sunset correspond to -50' for the centre of the sun (the edge of the sun is visible on the horizon).

Additional functions

(Type-dependent – see selection table on page 7)

Relay function

The relay state can be changed by selecting "MENU" and "FUNCTIONS". The relay is preset to the "AUTO" function; the time switch switches at the programmed times. The following can also be selected: "ALWAYS ON", "ALWAYS OFF" and "EXTRA". If "EXTRA" is selected, the switching status specified by the program is inverted. The time switch resumes switching according to the programmed switch times after the next switch command.

Holiday program

In holiday program, the holiday period is set with a start and an end date. It can be activated with the "ACTIVE" program item and deactivated with "PASSIVE". If the holiday program is activated, the time switch does not carry out any programmed switch commands during this time period. Instead, it remains "ALWAYS OFF" or "ALWAYS ON" during the holiday period, as requested. When the holiday period has ended, the time switch resumes switching according to the programmed switch times.

1 h test

The "1 h TEST" function can be used for a switching simulation. If "1 h TEST" is activated, the switch outputs are switched for one hour. After the time has ended, the time switch resumes switching according to the programmed switch times.

PIN code

Input and programming can be locked using a four-digit "PIN CODE". The time switch can be unlocked using the "PIN CODE". The time switch can also be unlocked using the "RESET" function, which also deletes all settings and programs.

Operating hours counter

This function displays the time for which the relay has been switched on and the date of the last reset. Counting range: 65,535 h.

Contrast adjustment

This function allows the user to adjust the display contrast.

Expert mode*

Expert mode is activated by selecting "OPTIONS" and "EXPERT". After expert mode is activated, the following additional functions can be used: control input "extra"¹⁾, control input "out"¹⁾, cycle function, channel-switching function (2-channel time switches), mains synchronous operation, offset correction function, geographical coordinates in degrees and arcminutes.

¹⁾ AlphaRex³ D21s, AlphaRex³ D21 astro, AlphaRex³ DY21

Control input with switch-off delay

Adjustable switch-off delay via control input. The control input enables an additional switching of the relay, parallel to the switching program. The switch-off delay can be set from 0 s to 23 h 59 min 59 s. The switch-off delay begins as soon as the voltage is removed from the control input.

Control input "extra"

Override of switching state via control input. If the "EXTRA" function is activated, the switching state specified by the program is inverted. The time switch resumes switching according to the programmed switch times after the next switch command. The "EXTRA" function is ended prematurely if the button is pressed again or if a pulse is received at the control input.

Control input "off"

Switch off via control input. Activating the "OFF" function causes the time switch to be switched off via the control input. The "OFF" function is ended if the button is pressed again or if a pulse is received at the control input. The time switch resumes switching on/off according to the programmed switch times.

Pulse function

Programmable with precision to the second.

Cycle function

Function for cyclical switching. With this function, the time switch is switched on once within a defined time period and for a defined duration. The cycle time can be set between 2 s and 2 h. The switch-on time can be set between 1 s and 1 h 59 min 59 s.

	Min.	Max.
Cycle	2 s	2 h
Switch-on time	1 s	1 h 59 min 59 s

Random function

If the random function is activated, set switch times are randomly shifted within a range of +/- 15 minutes.

Channel-switching function*

With 2-channel time switches, this function can be activated so that the time switch regularly switches between the outputs assigned to the channels, in order to protect connected devices (for example lights/lamps) or so that two devices can be used simultaneously. The channel-switching function is activated by selecting "MENU", "OPTIONS" and "CHANNEL 1<>2". The time switch switches between the outputs according to whether the menu item "DAILY" (once per day at 12:00 p.m.) or "WEEKLY" (once per week on Sunday at 12:00 p.m.) is selected.

Mains synchronous operation

Mains synchronised clock precision. By activating the "SYNC" function and then "ACTIVE", the quartz-controlled time switch becomes a synchronous time switch.
